

Light Rail Transit (LRT)

The City of Ottawa has already issued a notice to residents confirming plans to remove some trees on some area for construction of stage two of the new light rail transit (LRT) line. LRT is a form of urban rail transit using rolling stock similar to a tram, but operating at a higher capacity and speed, and often on an exclusive right-of-way.

Different people have different view about the LRT.

Devdatsinh Vasghela an employee in downtown says “It will help a little in maintaining the traffic in downtown, but overall it will be a disaster” High frequency trains will soon replace bus routes that operate between Blair and Tunney’s Pasture stations. With the new upcoming development there are also concerns about Oc transpo that is needed to be taken care off.

”Much more test and more trials required before they put on run for the public,” said Vasghela

There have been many train delays due to which people get late for their work. “Specifically with the bus it is so freaking slow, it doesn’t come on time. The trains are little better but these are very overcrowded and it always smells like piss on the train,” said Bonnie ho, an office employee who works near Clarence Street Ottawa, ON. She added “I am from Toronto and I am comparing TTCT to OTC the Toronto have more people and the buses which comes after every 10 minutes that’s why I am complaining because I am used to waiting no longer than 10 minutes for a bus and the subways use to come after every two minutes,” “ Time is of more concern not changing the bus,” People suggesting what LRT should do to improve their services “The buses frequency should be more but the stops should be less because the bus stops are so frequent that it took longer time to reach a place that it can be reached in like 20 minutes but it took 40 minutes to reach,” said Aastha Lambha from Algonquin College student in fitness and health. She further added “On peak hours, buses are late and they reach in such a wrong time, we always delayed for destination. The frequency is more at 11 am but very less around 7 am and that’s so wired. I think the peak hours should be changed,”

“Ottawa get lots of snow storms, so they should prepared during snow storms especially with the buses and try to come on time instead coming late by 40 minutes or so,” said Ho “Frequency of the busses needs to be increased as at some routes, bus ply only two times a day,” said Lambha “Most of the people have complain that busses comes so late,” Ho said, busses come late by 30 minutes and frequency is also very less.

Devdatsinh Vasghela told about his experience with LRTs and he says, “Earlier the buses were running on the same route like 95, 94 they were really helpful to go to the far distances like Lees street so he could take one bus from baseline to less and that could took hardly about 40 minutes but now bus from baseline to tunny’s pasture then take train from tunnies pasture to lees and even the trains does not work consistently it keeps on breaking-down.”

“Overall view about the LRT is first of all they should have planned properly before they start operating the trains. And second thing they should have taken vote from the people, if they want the whole thing go down or not,” said Vasghela
